

## Scrap Dance Two-Step! April From My Carolina Home

First, divide the total number of 4-1/2 inch scrappy squares into two equal number piles. If you are making the Queen size, you'll have an uneven number of squares, put the extra one on the first pile.

Match up those squares with the bar units as shown in the picture to the left. Make sure your background on this unit is touching the center square. The scrappy bars should be on the outside. You'll use half your bar units for this step, (just over half for Queen). Press toward the center square.

Now, Two Step! With the remaining 4-1/2-inch squares, use two QST units to make the unit on the right. Be sure that your scrappy QST touches the center square. The background QSTs should be oriented north-south. This will use up half of your QSTs. Press toward the center square.
